Catherine Lawrence is a lawyer, mother of three, and the founder and "CLO" (Chief Laughter Officer) of Survival of the Funniest, a company that promotes laughter in the workplace and life. In June 2006 Catherine was diagnosed with a devastating lung disease called Lymphangioliomyomatosis or LAM. Catherine, together with her friends and family, created "Green Eggs and LAM" to reinforce the importance of taking the disease seriously while taking herself lightly.

Funds raised by the Green Eggs and LAM team will support LAM research at The Stanford Lab at the University of Toronto. Dr. William Stanford received LAM cells from Dr. Elizabeth Henske and now he and his team have created LAM iPS stem cells! Some exciting experiments with these cells lie ahead!

Thank you from the bottom of our lungs! It is a matter of Life and Breath!
